

Wikipedia namespace structure (English Wikipedia)

Subject namespaces

(even, n)

Talk namespaces

(odd, $n+1$)

-2 Media

-1 Special

*Virtual namespaces: dynamically generated by MediaWiki,
not stored in page and without a talk counterpart.
Pairing rule: every subject namespace n has a talk namespace $n+1$ containing discussion pages about pages in n . The relationship is a column convention on `page.page_namespace`, not a declared foreign key.*
